💼 Work History

I started my adventure in Software Development pretty much when I was a kid (but don't worry, I promise I'll bother you just with the most recent twenty years in which I made it my career across Italy, Spain and Australia). If interested in further details, please reach out to me (I'd be glad to discuss them in more depth).

👔 Career Objective

In my career I have successfully covered a range of different roles, from Software Developer to Project Tech Lead and Manager.

I am currently looking for a new team leading role with focus on product definition, design and development. My goal is to help a team tackling problems and developing the best working solutions possible. My experience and natural curiosity has allowed me to be able to choose which tech is the most appropriate for each problem, and to define the most correct implementation strategy.

My personal idea of Leading is not just bossing around assigning tasks, I love pair working, mentoring and, why not, getting my hands dirty with some lines of code while testing and building PoCs, if my spare time allows me!

I have experience in dealing with C-suite members and a track record of amazing interactions and positive feedback with/from them (thanks also to my business management skills). I strongly believe that my role should work in sync with project managers, particularly around budgeting and planning. When this did not happen, though, I've consistently proven myself able to cater for both roles (PM and tech lead).

</> Tech & Language Skills

What follows is a (non-complete) list of technologies I would like to continue working with. Please note that such a list is continuously updated, since I love to learn new skills and improve myself (especially in an always-evolving field like IT) and my approach is also to use the best available tech for each problem, and not to revert to just those I feel most comfortable with.

Skill	Level
Docker & Kubernetes	70%
GO language	60%
TDD & Best Practices	85%
Cloud and Open-Stack	60%
Python	85%
Team Leading and Management	80%

Language	Level
Italian	99%
Spanish	90%
English	85%
Klingon	7%
